

Patient + Provider Discussion Guide

Print and share this guide with your healthcare provider.

Talk to your provider about whether the Galleri® test is right for you.

Who is the Galleri test for?

- The Galleri test is recommended for adults with an elevated risk for cancer, such as those age 50 and older.
- The Galleri test is available by prescription only.
- Use of the Galleri test is not recommended in individuals who are pregnant, 21 years old or younger, or undergoing active cancer treatment.

Topics to discuss with your healthcare provider

The following lifestyle factors and health conditions may increase your risk for cancer.¹ Check all that apply to you and discuss these with your provider.

- | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <input type="checkbox"/> Age 50 years or older <input type="checkbox"/> Personal history of cancer <input type="checkbox"/> Current smoker or history of smoking <input type="checkbox"/> Obesity <input type="checkbox"/> Diabetes <input type="checkbox"/> Family history of cancer (first degree relative) <input type="checkbox"/> Hereditary genetic predisposition (e.g. <i>BRCA</i> 1/2) <input type="checkbox"/> Occupational and toxic exposures (e.g. burn pits, asbestos) <input type="checkbox"/> Environmental exposures (e.g. alcohol consumption, sun exposure) | <p>Medical conditions:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Autoimmune chronic inflammatory conditions (e.g. IBD, asthma) <input type="checkbox"/> Non-autoimmune chronic inflammatory conditions (e.g. cirrhosis, chronic hepatitis B/C) <input type="checkbox"/> Immunodeficiencies (e.g. primary or viral, such as HIV or HPV) <input type="checkbox"/> Solid organ transplantation |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

- Share your concerns about cancer and why early detection is important to you
- Express your interest in the Galleri test and ask if it is right for you

Pricing

Most health insurance companies do not cover the cost of the Galleri test. The cost varies depending on the healthcare practice or provider who orders your test. The list price for the Galleri test is \$949.

- You may be eligible for a 12-month, 0% interest, flexible payment plan. Call GRAIL Customer Service at 833-694-2553 to learn more.
- The Galleri test may be eligible for FSA or HSA coverage. Check with your plan to confirm eligibility.

Important Safety Information: The Galleri test is recommended for use in adults with an elevated risk for cancer, such as those age 50 or older. The test does not detect all cancers and should be used in addition to routine cancer screening tests recommended by a healthcare provider. The Galleri test is intended to detect cancer signals and predict where in the body the cancer signal is located. Use of the test is not recommended in individuals who are pregnant, 21 years old or younger, or undergoing active cancer treatment. Results should be interpreted by a healthcare provider in the context of medical history, clinical signs, and symptoms. A test result of No Cancer Signal Detected does not rule out cancer. A test result of Cancer Signal Detected requires confirmatory diagnostic evaluation by medically established procedures (e.g., imaging) to confirm cancer. If cancer is not confirmed with further testing, it could mean that cancer is not present or testing was insufficient to detect cancer, including due to the cancer being located in a different part of the body. False positive (a cancer signal detected when cancer is not present) and false negative (a cancer signal not detected when cancer is present) test results do occur. **Rx only.**

Laboratory/Test Information: The GRAIL clinical laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and accredited by the College of American Pathologists. The Galleri test was developed — and its performance characteristics were determined — by GRAIL. The Galleri test has not been cleared or approved by the Food and Drug Administration. The GRAIL clinical laboratory is regulated under CLIA to perform high-complexity testing. The Galleri test is intended for clinical purposes.

See reverse page for healthcare provider information

Information for your healthcare provider

Around 70% of cancer deaths are caused by cancers without recommended screening.^{2,3}

Only 5 out of >100 known cancer types have recommended screening options: breast, colorectal, cervical, lung (for those at risk), and prostate.^{2,4}

What is the Galleri test?

The Galleri multi-cancer early detection test screens for many of the deadliest cancers, including those with no recommended screening today.^{2,5,6} Galleri identifies DNA shed by cancer cells into the bloodstream before symptoms appear⁷ and can be taken annually. In the case of a Cancer Signal Detected result, the test will predict the most likely origin of the cancer signal, helping guide the diagnostic workup.⁷ Visit [Galleri.com/50cancers](https://www.grail.com/50cancers) to learn about what cancers the Galleri test screens for.

200,000+ tests completed, 11,000+ prescribing physicians across the US

Test performance validated through large-scale clinical studies with 20,000+ participants^{6,7}

2x the cancers detected

In a clinical study, adding the Galleri test to standard-of-care screening* approximately doubled the number of cancers** detected.⁷

Low false positive rate

(1 in 200 people without cancer) helps minimize unnecessary diagnostic procedures to confirm cancer.^{6,7}

*Standard-of-care screening recommended by USPSTF (United States Preventive Services Task Force) for breast, cervical, colorectal, lung, and prostate cancer.
**Cancers detected by the early version of the Galleri test that were confirmed by a diagnostic workup.

There are two possible test results:

✓ No Cancer Signal Detected

This result means DNA fragments associated with cancer were not found in the blood sample. The test does not detect all cancers and not all cancers can be detected in the blood. This result does not completely rule out the possibility of cancer.

Next steps: Continue with routine cancer screenings.

! Cancer Signal Detected

This means DNA fragments often associated with cancer were found in the blood sample. This result will also include a prediction of the tissue type or organ associated with the cancer signal, called a **Cancer Signal Origin**.*

Next steps: This result is not a cancer diagnosis and requires follow-up diagnostic testing, which may include lab work or imaging to confirm cancer.

*GRAIL, Inc. Data on file: VV-TMF-59592

The Galleri test does not detect a signal for all cancers, and not all cancers can be detected in the blood. False positive and false negative results do occur. The Galleri test should be used in addition to healthcare provider recommended screening tests. See Important Safety Information on the previous page.

If the Galleri test is right for your patient, to order:

- 1 Complete and fax the Cover Sheet and Test Requisition Form (TRF) to 650-999-9000**
The specimen collection kit will be mailed directly to the patient. Please ensure the patient's mailing address is complete and accurate on the TRF.
- 2 Complete a blood draw, no fasting required**
To schedule a blood draw with a GRAIL partner laboratory, patients can visit [Galleri.com/schedule](https://www.grail.com/schedule)
- 3 Receive the results**
The results will be faxed to you about two weeks after receiving the sample at the GRAIL laboratory.

Welcome

Thank you for choosing Galleri®, the first-of-its-kind multi-cancer early detection test.

1 Complete and fax this form

Please ensure the patient information, email, and address are correct and legible; the Galleri kit will be shipped to the patient.

→ Fax the completed Test Requisition Form (TRF) with cover sheet to this number:
650-999-9000

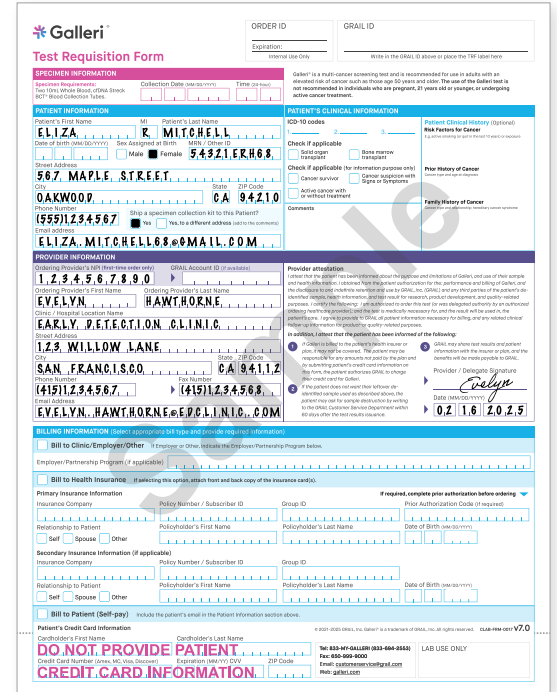

2 Expect a fax confirmation

Once we receive your order and verify your information, we will fax you a confirmation and your patient will receive a kit within a week.

→ Your test order is not placed until you receive a confirmation from us.

What to know

- GRAIL partners with labs nationwide for blood draw services. Your patient will be given information about convenient scheduling options when the collection kit arrives (Galleri.com/schedule).
- **The list price of the test is \$949.** Blood draw services are included in the price of the test when a Galleri-contracted site is used.
- Your patient will be billed directly, once their sample has been processed and the results are made available. **Please DO NOT provide a patient's credit card information.** We will work with your patient directly to collect this information securely.
- Results will be sent to you via fax to the number indicated on the TRF.

Provider attestation

I attest that the patient has been informed about the purpose and limitations of Galleri, and use of their sample and health information. I obtained from the patient authorization for the: performance and billing of Galleri, and the disclosure to and indefinite retention and use by GRAIL, Inc. (GRAIL) and any third parties of the patient's de-identified sample, health information, and test result for research, product development, and quality-related purposes. I certify the following: I am authorized to order this test (or was delegated authority by an authorized ordering healthcare provider); and the test is medically necessary for, and the result will be used in, the patient's care. I agree to provide to GRAIL all patient information necessary for billing, and any related clinical follow-up information for product-or quality-related purposes.

In addition, I attest that the patient has been informed of the following:

- 1. If Galleri is billed to the patient's health insurer or plan, it may not be covered. The patient may be responsible for any amounts not paid by the plan and by submitting patient's credit card information on this form, the patient authorizes GRAIL to charge their credit card for Galleri.
2. If the patient does not want their leftover de-identified sample used as described above, the patient may ask for sample destruction by writing to the GRAIL Customer Service Department within 60 days after the test results issuance.
3. GRAIL may share test results and patient information with the insurer or plan, and the benefits will be made payable to GRAIL.
