

Your Guide to the Galleri Testing Process

1 Request test

Start by creating an account at my.grail.com. Then, complete a test request form. A physician at PWNHealth, an Independent Telemedicine Partner, will review your request and confirm you are eligible.

2 Get approved

If eligible, a PWNHealth physician will approve your request and order the Galleri test for you. We'll ship you a collection kit and send an email with next steps.

3 Complete blood draw

Next, you'll need to do a blood draw with one of our partners.

- First, schedule a blood draw at galleri.com/schedule.
- Second, review and print your Test Requisition Form (emailed to you after your request is approved).
- Third, have your **printed form and collection kit** with you for your blood draw appointment.

The trained technician that draws your blood sample will mail the kit back to the GRAIL lab.

4 Receive results

Your blood sample will be processed and your results will be ready in about 2 weeks. You'll receive an email from PWNHealth when your results are available.

TIPS FOR YOUR BLOOD DRAW

- You can open the outer shipping wrapper of your collection kit, but do not open the actual kit or break the quality seal. Please store it at room temperature.
- You must **bring your collection kit and printed Test Requisition Form to your blood draw** — these are required for your appointment.
- Fasting is not required for your blood draw.
- No additional payment is required when you schedule through one of our partners.

Our Partners

Our trusted partners assisting you through the Galleri testing process.

PWNHealth is an Independent Telemedicine Partner. A PWNHealth physician will review your test request and order the test if you're eligible. They will also share your test results with you.

Blood Draw Partners

We are continuously adding partners to make your blood draw as convenient as possible. Current partners: **Quest, AnyLabTestNow!, CPL, Clinical Labs of Hawaii, Exam One.**

AccessHope will support you and your dependents throughout the cancer journey by connecting you to the best in cancer knowledge, expertise, and support, including recommended diagnostic care pathways if a Cancer Signal is detected.
