

Requesting the Galleri[®] test online is simple

01 Request the test

Request the test at Galleri.com/telemedrequest

An independent telemedicine provider will review your information and determine if the test is right for you.

02 Receive a kit

If the provider determines you are eligible and orders the test for you, a collection kit will be shipped to you directly.

03 Blood draw

Take your sample collection kit to a GRAIL partner lab for your blood draw. Schedule your blood draw at Galleri.com/schedule

04 Receive your results

Test results are available about two weeks after your blood sample is received at the GRAIL lab. You and the ordering telemedicine provider will receive the test results, and you will have an opportunity to consult with the ordering provider. You may share your results with your Primary Care provider as you choose.

Important Safety Information The Galleri test is recommended for use in adults with an elevated risk for cancer, such as those aged 50 or older. The Galleri test does not detect all cancers and should be used in addition to routine cancer screening tests recommended by a healthcare provider. Galleri is intended to detect cancer signals and predict where in the body the cancer signal is located. Use of Galleri is not recommended in individuals who are pregnant, 21 years old or younger, or undergoing active cancer treatment. Results should be interpreted by a healthcare provider in the context of medical history, clinical signs and symptoms. A test result of No Cancer Signal Detected does not rule out cancer. A test result of Cancer Signal Detected requires confirmatory diagnostic evaluation by medically established procedures (e.g. imaging) to confirm cancer. If cancer is not confirmed with further testing, it could mean that cancer is not present or testing was insufficient to detect cancer, including due to the cancer being located in a different part of the body. False-positive (a cancer signal detected when cancer is not present) and false-negative (a cancer signal not detected when cancer is present) test results do occur. **Rx only.**

Laboratory / Test Information The GRAIL clinical laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and accredited by the College of American Pathologists. The Galleri test was developed and its performance characteristics were determined by GRAIL. The Galleri test has not been cleared or approved by the Food and Drug Administration. The GRAIL clinical laboratory is regulated under CLIA to perform high-complexity testing. The Galleri test is intended for clinical purposes.
